THE PROJECT

INFINITY aims to transform the traditional idea of criminal investigation and analysis using immersive and collaborative environments. INFINITY's concept is based around four core research and technical innovations that together, will provide a revolutionary approach and convert data into actionable intelligence.

Infinity's **investigative immersive and interactive collaboration environment (I3CE)** provides LEAs with methods and tools to prevent, detect, analyse and combat criminal activities faster and more successfully by enhancing shared situational awareness and decision-making. Ultimately, these capabilities will bring about a paradigm shift in the capacity of EU Member States (MS) in **the fight against cybercrime and terrorism** while putting in place governance processes to maintain **full compliance with fundamental rights and protecting privacy and personal data**.

STATUS

As leading experts in VR collaborative work environments, Manzalab will lead Work Package 4, the collaborative VR application allowing distant people to meet in the same virtual environment and share information (text files, 2D and 360° images, 2D and 360° videos, 3D models). We will be in charge of the management system: access, interaction, communication.
