THE PROJECT

Video material collected and analysed by Law Enforcement Agencies (LEA) has become a critical component in legal investigations following major criminal acts and terrorist attacks. The recent events in London, Nice, Brussels, Paris, Barcelona and Cambrils again prove the importance of these video recordings. At the same time, the amount of video data available is continuously increasing with the rapid deployment of video equipment, surveillance cameras in public and private areas, body-worn cameras of police forces and smartphones or digital cameras used by bystanders.

VICTORIA is coordinated by IDEMIA and gathers 14 partners. It was launched on 1st May 2017 for 3 years, with EU funding (grant agreement No 740754). The project is addressing this need and will deliver an ethical and legally compliant video analysis platform that will accelerate the video analysis tasks of Law Enforcement Agencies.

STATUS

Manzalab participates through the creation of tools and virtual environments to train video analysis algorithms. These tools will offer the possibility to change easily the conditions of the scenario (lightening, quality of images...) and improve the robustness of analysis.
